ABC 2022 SAFETY PERFORMANCE REPORT

ABC 2022 SAFETY PERFORMANCE REPORT

UNDERSTANDING THE IMPACT OF DEPLOYING ABC'S STEP SAFETY MANAGEMENT SYSTEM ON OVERALL SAFETY PERFORMANCE

©2022 Associated Builders and Contractors Inc. All rights reserved.

Disclaimer:

The information in this report is for reference purposes only and reflects data submitted by ABC member companies during the 2021 STEP term, Jan. 15-Dec. 15, 2021. Any unauthorized use or distribution of this information without the express written consent of Associated Builders and Contractors Inc. (440 First St. NW, Suite 200, Washington, DC 20001) is strictly prohibited.

ABC engaged RSM, an independent third party and leading U.S. provider of audit, tax and consulting services, to recalculate ABC's calculations and check formulas used against published formula definitions. The 2021 STEP self-assessment data from ABC members was used to calculate the numbers reflected in the 2022 Safety Performance Report.

You Can Achieve World-Class Safety. Start Today.

Executing on your commitment to world-class safety takes fortitude and effort, as it is fraught with leadership challenges. During this journey, leaders eventually ask themselves and their employees questions such as:

- Do we truly believe that all incidents are preventable?
- Are we unwilling to compromise someone's safety for profit, productivity, schedule or any other priority?

ABC provides the industry with four tools that help create the conditions for everyone to complete their work without incident and go home safe and healthy every day.

1 ABC's STEP is a world-class safety management system improved annually by the ABC National Health and Safety Committee.

2 The annual ABC Safety Performance Report analyzes the cause-and-effect relationship between best-in-class processes and incident prevention.

3 ABC's Safety Academy helps construction companies lay out a multi-year plan to achieve industry-leading safety results.

4 A suite of best practices and model policy supported by classroom and virtual education is delivered at national events and through our 69 chapters across the United States.

Michael D. Bellaman
President and CEO

Greg Sizemore
Vice President, HSE and
Workforce Development

Joseph Xavier
Senior Director of
Health and Safety

If we choose to lead, if we choose to commit, and if we choose to transform, together we will create the conditions for all to do their work without incident and go home safe and healthy every day.

These tools provide leaders with a roadmap to win and deliver their work without incident:

Leadership commitment to an organization that creates the conditions for all to do their work without incident.

Cultural transformation into a company where every employee believes all incidents are preventable.

Deployment of a **world-class safety management system** throughout the organization with the desire to achieve industry-leading results.

World-class results delivered using leading and trailing indicators to share successes and lessons learned with all employees.

I am confident the 2022 ABC Safety Performance Report will help you on your journey. Please feel free to share the report widely with your teammates, specialty contractors, clients and competitors.

If we choose to lead, if we choose to commit and if we choose to transform, together we will create the conditions for all to do their work without incident and go home safe and healthy every day.

Michael D. Bellaman
President and CEO
Associated Builders and Contractors

Introduction

Every company that works in construction wants to send its workers home in the same condition in which they arrived—if not even better—after an active day of work that stimulates the mind and body.

Until now, relatively few studies have been conducted on the correlation between the use of measures companies can take to keep workers safe on jobsites—leading indicators—and the number of incidents, accidents and injuries that occur—trailing indicators. The empirical evidence did not exist.

Associated Builders and Contractors created the Safety Performance Report to address this issue.

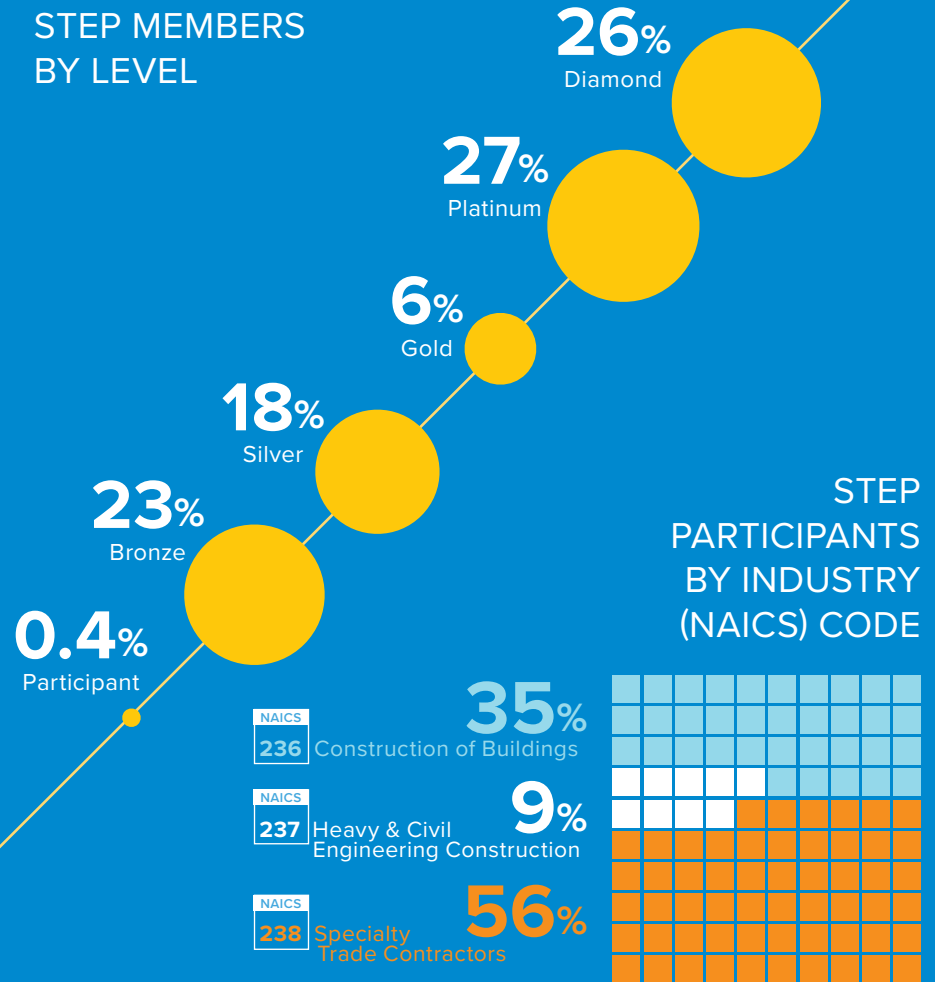

The charts and summaries within this report present the clearest picture to date of the remarkable impact that leading indicator use has on a company's safety performance: fewer disrupted or lost lives and a safer jobsite regardless of company size. In fact, companies that engage in leading indicator use are, statistically, considerably safer than their peers.

**Leading indicator programs work
to improve safety performance.**

Methodology

The 2022 ABC Safety Performance Report is based on submissions of unique company data gathered from members that deployed STEP in 2021. ABC collects each company's trailing indicator data as reported on its annual Occupational Safety and Health Administration Form 300A ("Summary of Work-Related Injuries and Illnesses") and its self-assessment of leading indicator practices from its STEP application. Each of the 35 data points collected is sorted using statistically valid methodology developed by the U.S. Bureau of Labor Statistics for its annual Occupational Injuries and Illnesses Survey and then combined to produce analyses of STEP member performance against BLS industry average incident rates.

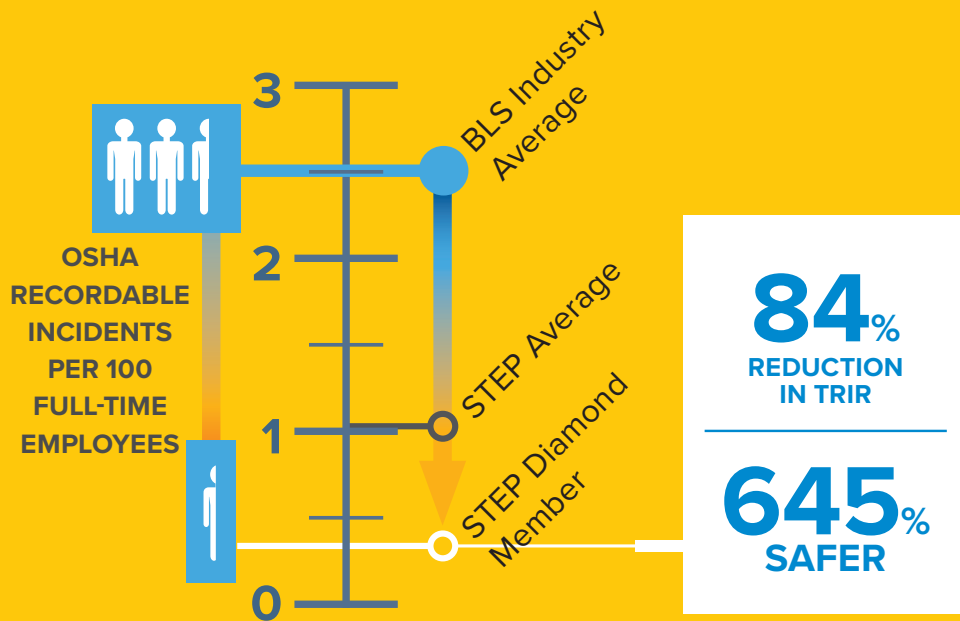

STEP MEMBERS BY LEVEL

STEP PARTICIPANTS BY INDUSTRY (NAICS) CODE

ABC STEP MEMBERS ARE MORE THAN SIX TIMES SAFER THAN THE CONSTRUCTION INDUSTRY AVERAGE

Total Recordable Incident Rate: STEP vs. the U.S. Bureau of Labor Statistics Industry Average

What if Your Company Could Be 645% Safer Than the Industry Average?

And you could reduce your Total Recordable Incident Rate by 84%?

It's more than possible. **It's doable.**

The 2022 ABC Safety Performance Report is not a research project or an academic study. It captures the results of ABC STEP member companies performing real work on real projects. ABC is building on the analysis of more than a billion hours of work annually presented in the 2017, 2018, 2019, 2020 and 2021 reports to identify what comprises a world-class safety program.

TRAILING INDICATORS: OUTPUTS AND RESULTS

Measuring Safety Performance

The construction industry has long evaluated safety performance based on trailing indicators—statistics that measure performance based on past incidents or conditions. These statistics judge companies not on the steps taken to prevent jobsite injuries and fatalities, but rather on the number of past safety failures. Trailing indicators only tell part of the story.

Safety performance isn't reflected in what you **did**. It's reflected in what you're **doing**.

Total Recordable Incident Rate

Days Away, Restricted or Transferred Rate

Experience Modification Rate

3

FATAL INJURIES PER DAY

Every workday in the construction industry, an average of three people are fatally injured.

**LEADING INDICATOR
IMPLEMENTATION**

**TRAILING INDICATOR
PERFORMANCE**

GOAL: Determine the correlation between **leading** indicator implementation and **trailing** indicator performance.

What's Behind World-Class Safety Performance?

Innovative thinking from contractors, the owner/user community and insurers puts leading indicators under the microscope.

ABC has studied how to improve safety through STEP since 1989.

The 2021 STEP application is comprised of key components—leading indicators that are proven to improve safety performance and the criteria that indicate best practices. Members that deploy STEP score their level of achievement for each component on a weighted scale of 0 points (low score) up to 12 points (high score). Companies receive a recognition level of Diamond, Platinum, Gold, Silver, Bronze or Participant based on their score.

ABC quantified the positive impact of proactive injury and hazard elimination tools on the jobsite using data gathered from STEP participants in construction, heavy construction, civil engineering and specialty trades. Analyzing aggregated data allows ABC to determine how measures taken to prevent incidents actually improve trailing indicator performance.

Key components of a world-class safety program.

STEP Improves Safety

STEP is a safety management system. Participating ABC member firms measured their safety processes and policies on key components in 2021 through a detailed questionnaire with the goal of implementing or enhancing safety programs that reduce jobsite incident rates. Applying world-class processes dramatically improves safety performance among participants, regardless of company size or type of work.

“Safety is a journey that will never end. Although there is no silver bullet, STEP is the closest thing to it. This world-class health and safety management system provides us with a variety of tools/programs to choose from that fit our culture. It is also comforting to know that these are proven to work and considered to be best practices by our peers in the industry. Regardless of the size of your organization, the benefit of STEP is that it is scalable to your company’s needs. I strongly encourage you to begin using the STEP key components.”

—Michael W. Bennett, vice president, The Cianbro Cos., Pittsfield, Maine, STEP Platinum and ABC Accredited Quality Contractor 2021 chair, ABC National Health and Safety Committee

STEP ACHIEVEMENT LEVELS

TRIR at or below 50% of the BLS NAICS code average in each of the previous three data years

TRIR at or below 25% of the BLS NAICS code average for the data year

TRIR at or below BLS NAICS code average for the data year

No lives lost or catastrophic incidents, company-wide, during the application year

No lives lost or catastrophic incidents, company-wide, during the previous three years resulting in an OSHA citation

Minimum key components score

Diamond
Platinum
Gold
Silver/Bronze

Get Into STEP

Analyze your safety and loss program

The Road Map to World-Class Safety

LEADERSHIP is the courage to be out front, challenge the status quo and create a **CULTURE** that is passionate in its belief that all incidents are preventable—a culture where safety is considered a moral obligation not just for leaders, but for all employees. A culture of safety cannot exist without leaders taking a stand that includes an unwillingness to compromise safety and modeling this belief in every action. **PROCESS** is the intentional, systematic implementation of a safety management system that enables a firm to initiate and sustain their journey to world-class safety. **RESULTS** are the tangible benefits that arise from the consistent implementation of the preceding components.

WORLD-CLASS RESULTS

**NEW HIRE
SAFETY
ORIENTATION**

**SUBSTANCE
ABUSE
PREVENTION
PROGRAMS**

**TOOLBOX
TALKS**

**TOP
MANAGEMENT
ENGAGEMENT**

The Foundations of World-Class Safety

The top-performing STEP members implement these best practices as part of a world-class safety management system.

BEST PRACTICES

New Hire Safety Orientation

Companies that conduct an in-depth indoctrination of new employees into the safety culture, systems and processes based on a documented orientation process experience incident rates 70%-72% lower than companies that limit their orientations to basic safety and health compliance topics. The CEO or senior leadership delivers that introduction to the company's safety culture and core values, including:

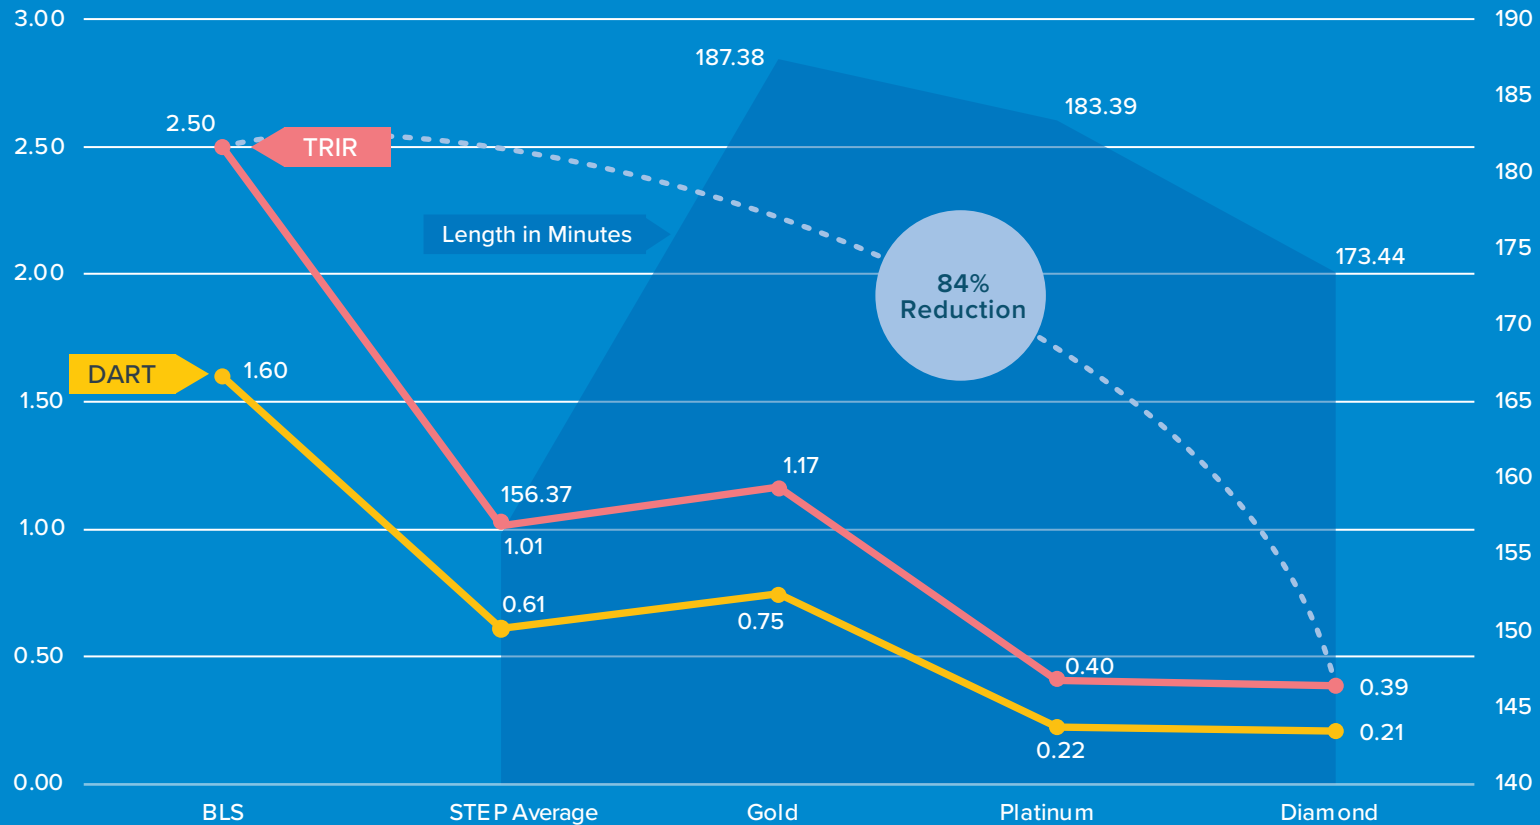

- Safety commitment, expectations and responsibilities
- Workplace safety rules specific to the site and hazards
- Hazard, injury and emergency communication and reporting procedures
- Protective gear/safety skills demonstrations
- Assignment of a safety mentor to each new hire until orientation is complete
- Performance evaluation and recordkeeping

NEW HIRE SAFETY ORIENTATION: LOW SCORE VS. HIGH SCORE

IN-DEPTH SAFETY ORIENTATIONS ARE MORE EFFECTIVE

STEP Gold members invested more time to make safety orientations effective in 2021, an average of 187 minutes vs. 155 minutes in 2020. STEP Diamond companies that conduct new hire orientation sessions of nearly three hours on average improve their TRIR by 84%.

SUBSTANCE ABUSE PREVENTION PROGRAMS: LOW SCORE VS. HIGH SCORE

BEST PRACTICES

Substance Abuse Prevention Programs

One-third of all incidents on construction jobsites are drug- or alcohol-related. Robust substance abuse prevention programs/ policies with provisions for drug and alcohol testing where permitted lead to a 70% reduction in TRIR and a 73% reduction in DART rates. Plus, substance abuse testing can be an effective method of incident prevention if used properly.

ABC is an active member of the Construction Coalition for a Drug-and Alcohol-Free Workplace. Signing the pledge is a STEP requirement. Take the pledge at drugfreeconstruction.org.

SUBSTANCE ABUSE PREVENTION PROGRAMS REDUCE INCIDENTS

Key components include:

A safety policy with strict rules regarding drug and alcohol use, supervisor training, recordkeeping and active enforcement

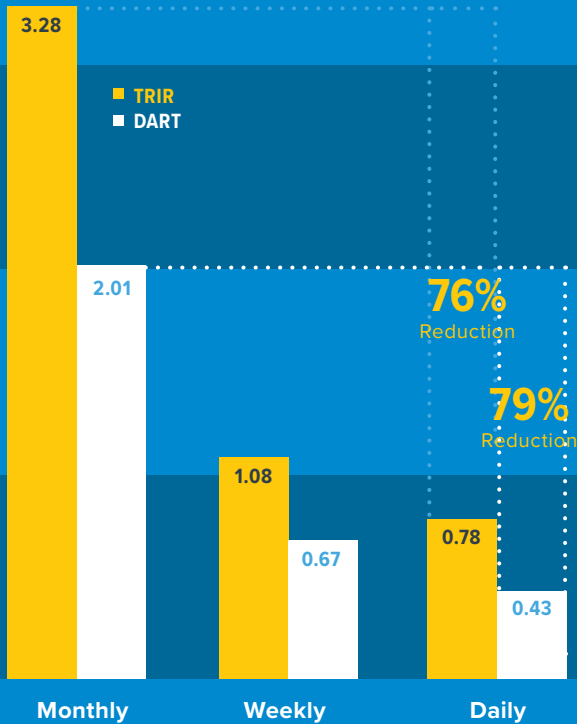

Drug and alcohol testing pre-hire, randomly and with reasonable suspicion

An employee assistance program and available education on substance abuse prevention

FREQUENCY OF TOOLBOX TALKS

BEST PRACTICES

Toolbox Talks

Can you brief employees on safety too much? No matter what you may have heard, there is no negative effect to conducting daily toolbox talks—brief, single-topic training sessions of 15 to 30 minutes held on the jobsite for all employees. The less frequently this type of training is conducted and the fewer safety topics covered, the higher the trailing indicators. Companies that conduct daily toolbox talks reduce TRIR by 76% and DART rates by 79% compared to companies that hold them monthly.

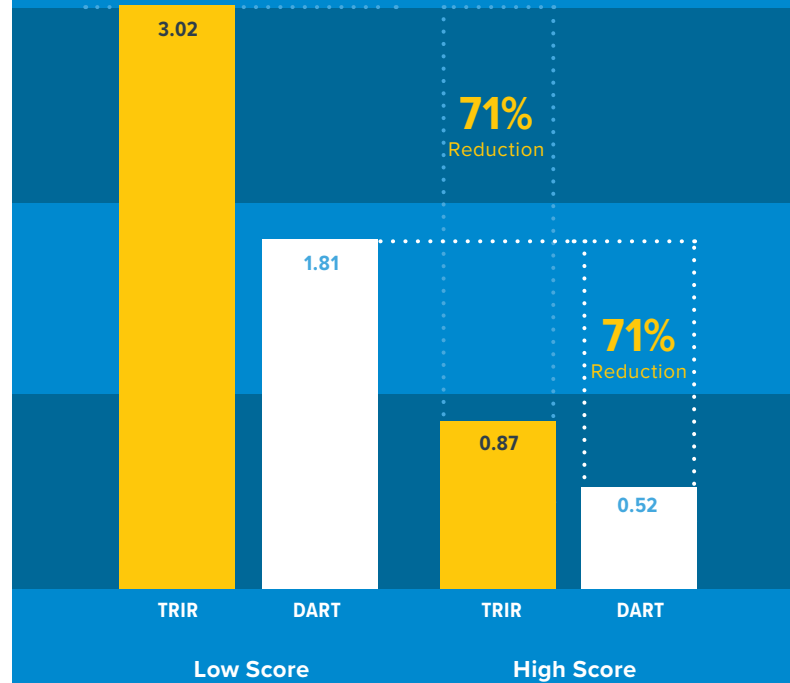

BEST PRACTICES

Top Management Engagement Matters

Employer involvement at the highest level of company management produces a 71% reduction in TRIR and DART rates. In high-scoring ABC STEP member firms, the owner/CEO:

- Is a direct and active participant in the safety program
- Instills personal accountability for safety throughout the company
- Tracks and annually reviews safety goals and objectives
- Solicits feedback on the safety program and seeks ways to improve it
- Commits resources—money, time, personnel, equipment, supplies, etc.
- Integrates safety into performance appraisals and other company operations

TOP MANAGEMENT ENGAGEMENT: LOW SCORE VS. HIGH SCORE

Five Core Leading Indicators

A leading indicator is a system or process used to identify hazards and eliminate or minimize the condition to prevent injury.

This report focuses on five core leading indicators that have the most dramatic impact on safety performance.

EMPLOYEE
PARTICIPATION

SUPERVISOR
SAFETY
MEETINGS

PRE-PLANNING
FOR PROJECT
SAFETY

PERSONAL
PROTECTIVE
EQUIPMENT

INCIDENT
INVESTIGATIONS

CORE LEADING INDICATORS

Employee Participation Counts

Employee participation throughout the safety management system improves TRIR by 70% and DART rates by 71%. High-scoring STEP firms:

A commitment to employee **safety training** lowers incident rates.

EMPLOYEE PARTICIPATION: LOW SCORE VS. HIGH SCORE

EMPLOYER-CONDUCTED SUPERVISOR SAFETY MEETINGS: LOW SCORE VS. HIGH SCORE

CORE LEADING INDICATORS

Supervisor Safety Meetings

Conducting weekly safety meetings with supervisors and distributing minutes for review leads to a 73% reduction in TRIR and a 72% reduction in DART rates.

CORE LEADING INDICATORS

Pre-Planning for Project Safety

Educating project supervisors and other key personnel in pre-planning for project safety and safety pre-planning reduces TRIR and DART rates by 73%.

PRE-PLANNING FOR PROJECT SAFETY: LOW SCORE VS. HIGH SCORE

USE OF PPE: LOW SCORE VS. HIGH SCORE

CORE LEADING INDICATORS

Use of Personal Protective Equipment

Having a written PPE policy that is consistently and universally enforced, conducting an annual needs assessment and continually investing in new equipment leads to a 65% reduction in TRIR and a 66% reduction in DART rates.

CORE LEADING INDICATORS

Incident Investigations

A systematic process to find the root causes of problems and develop effective solutions to improve performance reduces TRIR and DART by 74%.

INCIDENT INVESTIGATIONS: LOW SCORE VS. HIGH SCORE

BENCHMARKING STEP MEMBER SAFETY PERFORMANCE, 2007-2021

“If you can’t measure it, you can’t manage it.’ This is a famous quote used by many industry managers to describe their approach toward continuous improvement.

So how do you measure safety success? That is the question that many construction safety professionals worked with ABC to answer when they developed STEP. STEP helped us perform an internal analysis of our safety performance and provided a meaningful, measurable and actionable gap analysis of our safety programs and ongoing safety efforts. Safety excellence is a journey. To start your journey, you must first find yourself on the map and chart your course from there. Let STEP be your navigator. It’s never too late to get going.”

“One of the comments I sometimes hear from other contractors my size is that it ‘takes too long’ to complete the STEP application. We’ve found that, with

minimal preparation, it takes less than 30 minutes. The secret is completing the key component scoring before you start the application process. That’s because this is where your true company safety evaluation starts—you don’t want to rush it. Commit to an authentic evaluation and you will truly be on the path to world-class safety.”

—Stephanie Schmidt, president, Poole Anderson Construction LLC, State College, Pennsylvania, STEP Platinum and ABC Accredited Quality Contractor
2022 chair of the ABC National Board of Directors

Glossary of Common Terms

ABC – Associated Builders and Contractors, a construction trade association representing more than 21,000 merit shop contractors and affiliated firms nationwide.

Accredited Quality Contractor – ABC’s credential recognizing members’ commitment to corporate responsibility in quality, safety, talent management—including inclusion, diversity and equity—education and community relations.

BLS – U.S. Bureau of Labor Statistics, a federal agency responsible for providing statistical analysis on workplace injuries, illnesses and fatalities. Operates under the scope of the U.S. Department of Labor.

CII – Construction Industry Institute, a consortium of owners, engineering-construction firms and suppliers focused on the effectiveness and sustainability of the capital facility life cycle through research and industry initiatives.

CCDAFW – Construction Coalition for a Drug- and Alcohol-free Workplace, established in 2012 by construction trade associations to develop resources in the campaign to eliminate substance abuse in the industry.

CURT – The Construction Users Roundtable represents many owners, users and clients that hire construction industry firms.

DART – Days Away, Restricted or Transferred rate. Measures the number of cases per 100 full-time employees where an injury or illness causes an employee to be restricted or transferred based on inability to perform normal job functions.

Disrupted Life/Lives – Nonstatistical term used to describe the impact on the employee, friends and family when a life has been disrupted because of an injury suffered during work hours.

EMR – Also referred to as Experience Modification Rate or “mod factor.” Calculation normally performed by the insurance industry (National Council on Compensation Insurance or state-level agency) reflecting percentage of workers’ compensation payouts by a company compared to a company of similar size and type.

FTE – Full-time employee as defined by BLS and captured on a company’s OSHA Form 300A, which tracks the number of full-time employees that a company employs in the course of a calendar year.

Good Catch – The recognition and correction of a hazardous condition or event that, if it occurred, would likely not cause death, serious physical harm or extensive property damage.

Incident Investigations – A systematic process to find the root causes of problems and develop effective solutions to improve performance.

Leading Indicators – A measure preceding or indicating a future event that is used to drive and measure activities carried out to prevent and control injury, such as safety training, new hire safety orientation and behavior-based safety observations.

Lost Life/Lives – Nonstatistical term used to describe a fatality caused by an injury suffered during work hours and the long-term impact, beyond the lost life, on family and friends.

OSHA – The Occupational Safety and Health Administration, a U.S. government agency tasked with establishing workplace safety and health requirements and enforcement of existing rules. Operates under the scope of the U.S. Department of Labor.

OSHA Form 300A – The “Summary of Work-Related Injuries and Illnesses” required by OSHA for all companies with 11 or more employees. It is created using information gathered from a company’s OSHA Form 300, the “Log of Work-Related Injuries and Illnesses.”

Potential Significant Event – The recognition and correction of a hazardous condition or event that, if it occurred, would likely cause death, serious physical harm or extensive property damage.

Pre-Planning for Jobsite Safety – Project supervision and other key personnel are trained in pre-planning for project safety and safety pre-planning is integrated into the estimate, bid and mobilization/demobilization stages of projects. A checklist or similar document is used to ensure a consistent and comprehensive approach to exposure evaluation and resource needs and project safety plans are regularly updated throughout life of project.

Resources for Safety – Funds, time, personnel, equipment, supplies, etc. are regularly budgeted and invested, and the return on safety investment (actual or projected) is tracked to evaluate the effectiveness of resource allocation and to guide future expenditure decisions.

New Hire Safety Orientation – Amount of time, in minutes, a company devotes to covering safety-related topics during orientation for all new employees.

STEP – ABC’s safety management system, created in 1989 to gather data related to member safety performance and to evaluate the effectiveness of safety programs based on the key components of world-class safety programs.

Toolbox Talks – Topic-specific, short-format training, usually conducted before the workday or during lunch breaks, aimed at crews and site employees to educate on specific safety and health topics, hazards, policies and procedures.

Top Performers – ABC’s annual ranking of contractor members that build long-lasting, high-quality construction projects, based on work hours. Visit abc.org/topperformers to learn more.

TRIR – Total Recordable Incident Rate. Measures the number of cases per 100 full-time employees where an injury or illness caused a loss of life or a situation resulting in an employee being unable to work (days away), restricted or transferred based on inability to perform normal job functions, or any other injury that falls under OSHA’s definition of a recordable incident.
